

Pizza Sales Dashboard

A Power BI Project by Sejal

Project Objective

- The objective of this project is to analyze pizza sales data to derive meaningful business insights.
 - This dashboard focuses on revenue, orders, customer behavior, and product performance.

It helps businesses:

- Identify best and worst selling pizzas 📈
- Understand sales trends by day, month, category, and size
- Support data-driven decision-making 🚀

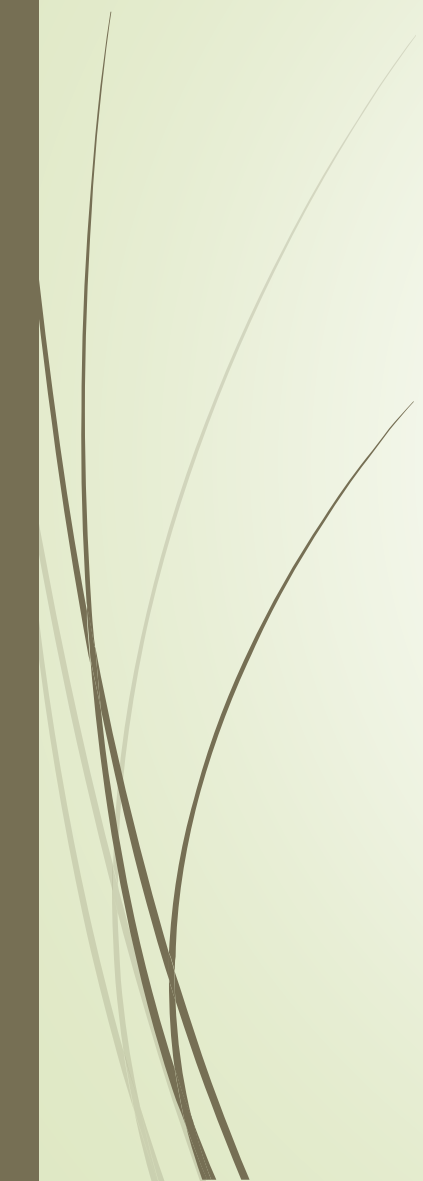

Tools & Techniques

- Power BI Desktop – dashboard creation and report design
 - Power Query Editor – data cleaning and transformation
 - DAX – calculated measures and KPIs
 - Data Modeling – table relationships and performance optimization
 - Interactive visuals, slicers, and navigation buttons

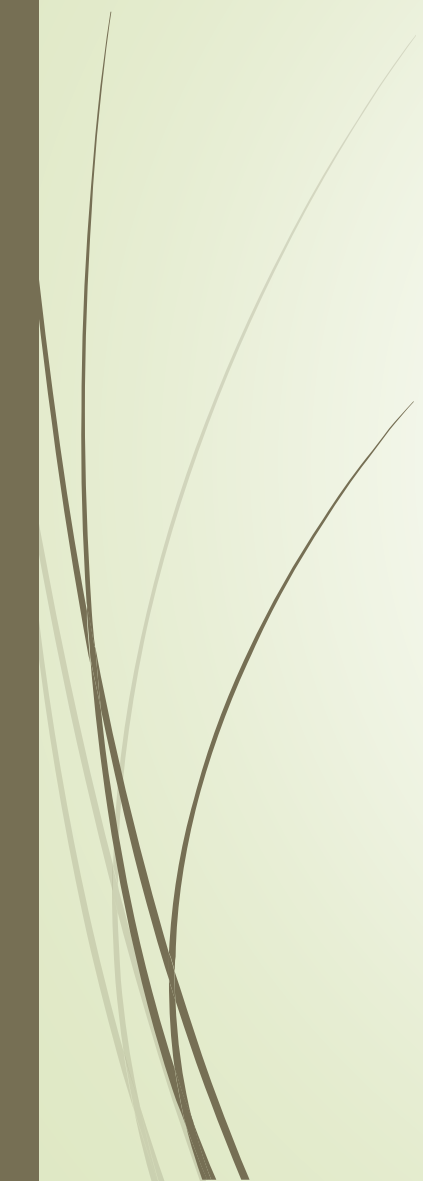

Raw Data

- Pizza_id
- Order_id
- pizza name_id
- Pizza_name
- Pizza_category
- Pizza_size
- Pizza_ingredients
- quantity
- Unit_price
- Total_price
- Order_date
- Order_time

Problem Statement

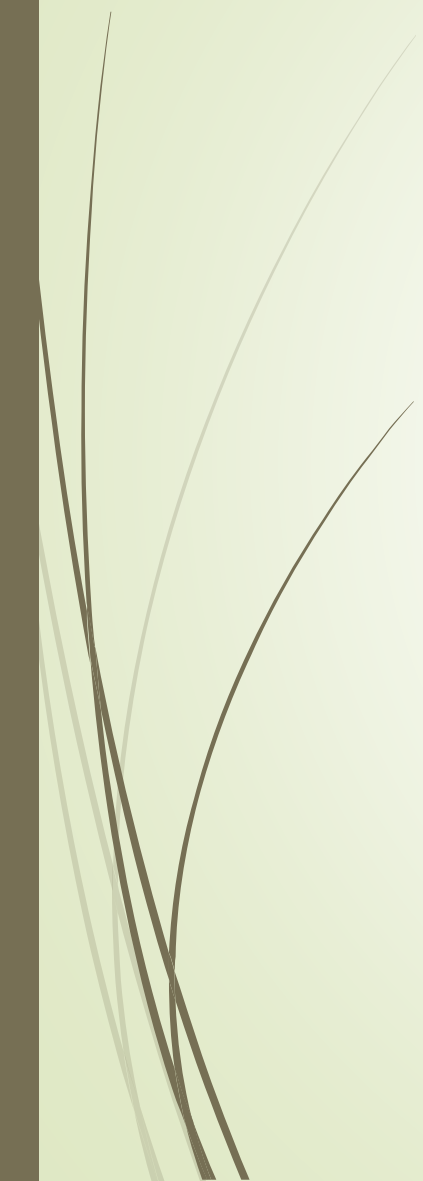

- Before creating this dashboard, it was difficult to analyze pizza sales performance effectively.

The business lacked clarity on:

- Which pizza categories and sizes generate maximum revenue
- Peak order days and seasonal demand patterns
- Best and worst performing pizzas
- Overall business performance through KPIs

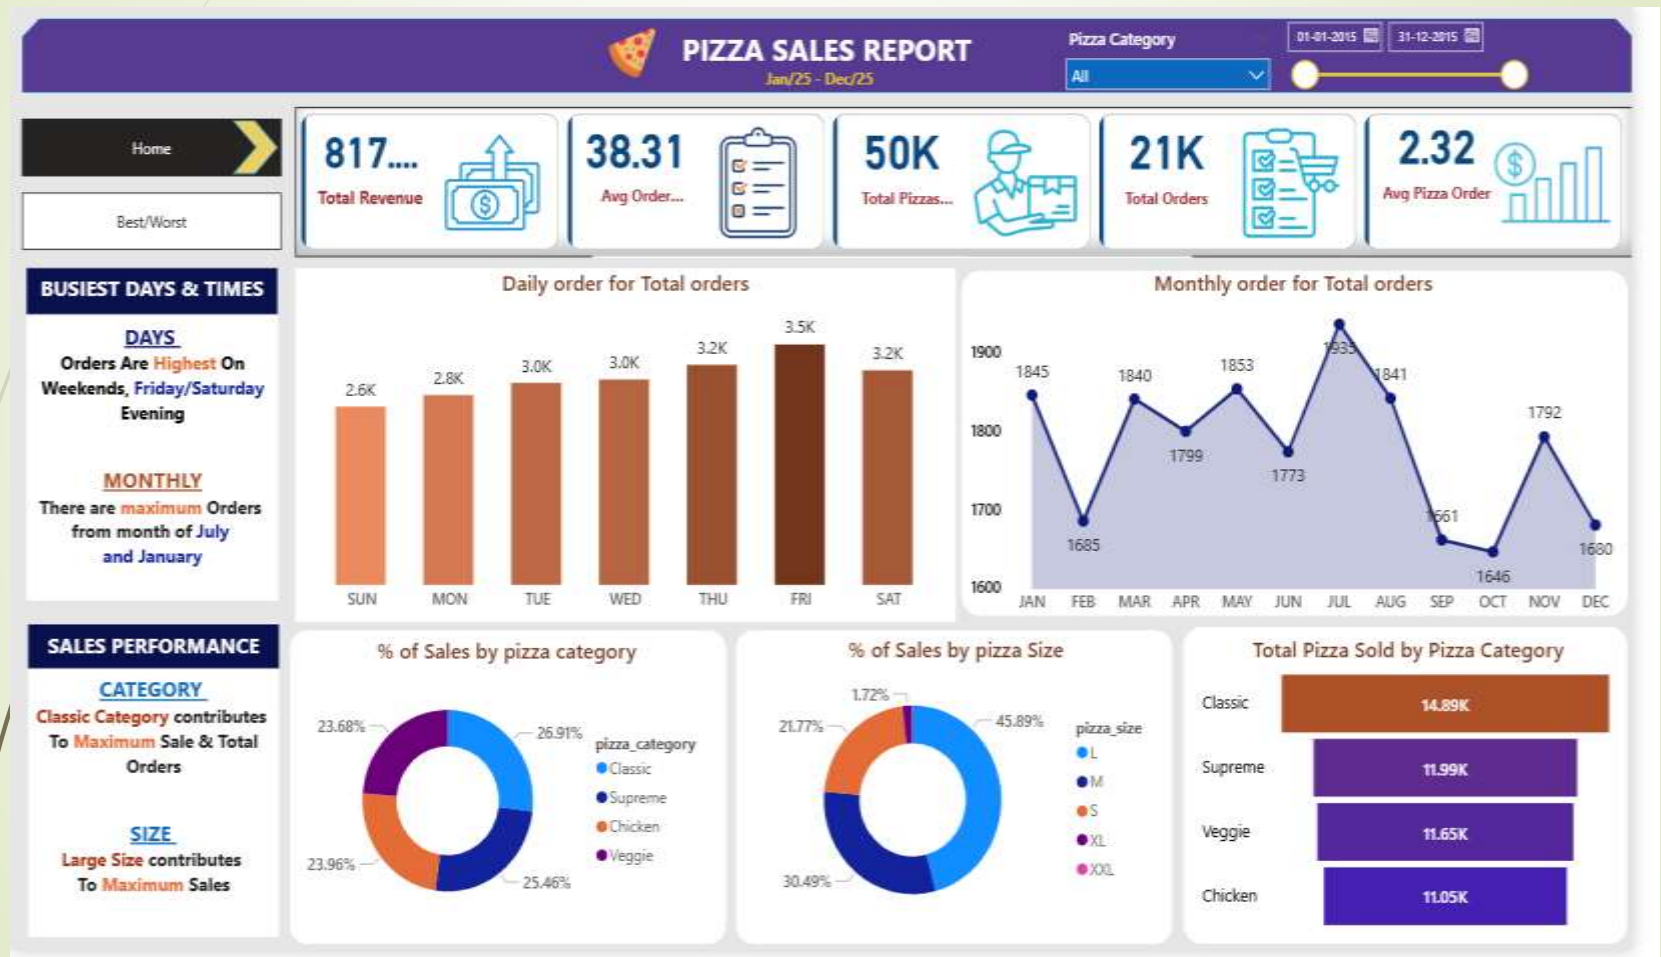

Project Requirements

- What is the total revenue, total orders, and pizzas sold? 💰
 - Which pizza category and size contribute the most to sales? 🍕
 - Which days and months have the highest number of orders? 📅
 - Who are the top 5 and bottom 5 pizzas by revenue, quantity, and orders?
 - How does customer demand vary over time?

Dashboard (Home Page)

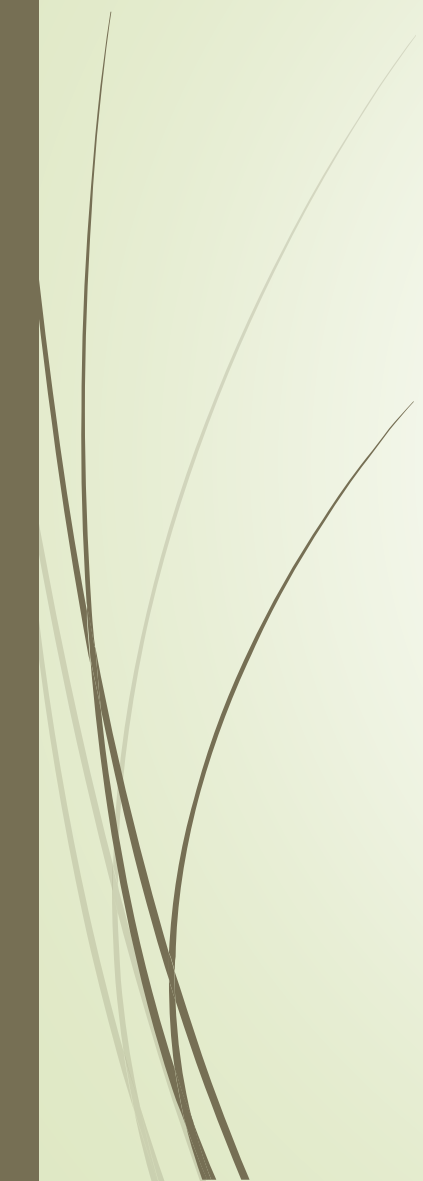

Best and Worst Sale

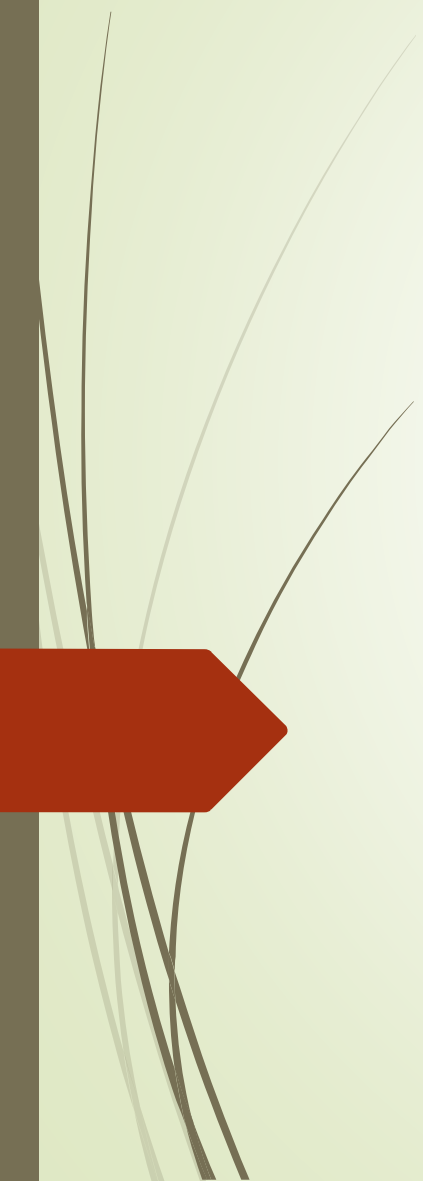

Conclusion

- This Power BI dashboard converts raw pizza sales data into actionable insights.
 - It helps identify high-performing and low-performing products.
 - Improves business decision-making through data storytelling.
 - Strengthened skills in Power BI, DAX, Power Query, and data modeling.
 - Enhanced ability to present business insights visually
